Introducing Dynamic Walls into Integer Lattice Gas Simulations

David Jedynak

NDSU

May 10th, 2018

Introduction

- Explore interactions between gas and rigid shapes
- ▶ Build off of existing Lattice Gas Simulation Code

initial goals

- ► Non leaking dynamic walls
- Make complex shapes out of these dynamic walls
- ▶ Reproduce the Feynman tube experiment.

Method 1

Expected value of flow

< flow >= particle density * wall velocity

 $0 < flow < \min particle density$

```
int tmp_0 = n[vx+x][y+vy][8-v];
int tmp = n[vx+x][v+vy][v]:
    int max_random = 1;
    if(tmp > tmp_0) \{ max_random = tmp_0; \}
    else { max_random = tmp; }
    if (\max_{random} > 0) flow = (rand()\%\max_{random} random)
    else{flow = 0;}
n|x+vx|[((y+vy)]|v] = n[x]|y|[8-v] - flow:
n[x][y][8-y] = tmp + flow;
```

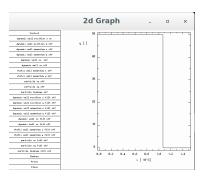

Figure 4:

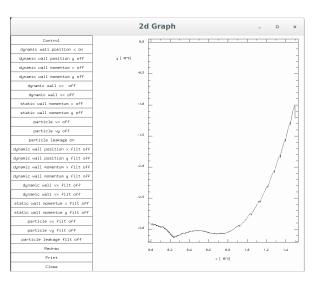

Figure 5:

Method 2

In more detail, the probability that

$$pr * particle density$$

number of particles will be moved is

$$\textit{pr} = \frac{\text{Wall Vx}}{1 - \left(\text{real(Wall x)} - \text{int(Wall x)} \right)}$$

.

```
int tmp = n[x_-v_-b][y_-v_-b][v];

int iwp = dynamic_wall_position_x;//integer wall point flow = 0;//particles to be moved

double pr = dynamic_wall_vx/(1-(dynamic_wall_position)) = n(y_-b)(y_-b)[v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_-b][v_
```

 $n[x_v_b][y_v_b][v] = n[x_b][y_b][8-v];$

 $n[x_b][y_b][8-v] = tmp; // + flow;$

Method 3

$$\frac{\partial \rho}{\partial t} + \frac{\partial (\rho u_i)}{\partial x_i} = \nabla(\rho) + \upsilon * \nabla(\nabla(U) + (\nabla(U)T)) \tag{1}$$
The partial for each assumed he set to zero. This gives us

(2)

(3)

The partial for ρ and ρu_i can be set to zero. This gives us:

$$0 = \nabla(\rho) + \upsilon * \nabla(\nabla(U) + (\nabla(U)T))$$

$$\nabla(\rho) = F$$

 $0 = F + \upsilon * \nabla(\nabla(U_{\mathsf{Y}}))$

U_

(mean velocity) above gives us:

$$U_x = \frac{F}{2*v}*(x(x-L))$$
Where L is the length of the tube in Lattice sites

```
void moveParticles(){
for (int x = 0; x < xdim; x++){
 for (int y = 0; y < y dim; y++){
         int flip_parts = particle_flip_w *
         ((double)rand()/RAND_MAX)*n[x][y][5];
         n[x][y][3] += flip_parts;
         n[x][y][5] = flip_parts;
         flip_parts = particle_flip_w*
         ((double) rand()/(double) RAND_MAX)*n[x][y][
         n[x][y][6] += flip_parts;
         n[x][y][8] = flip_parts;
         flip_parts = particle_flip_w *
         ((double)rand()/(double)RAND_MAX)*n[x][y][
         n[x][y][0] += flip_parts;
         n[x][y][2] -= flip_parts;
```

Conclusions and Final thoughts

- Significant leakage for most walls
- Partially working
- Problem depth and complexity
- ► Approach 3 Issue might be solvable
